

## *Covering New Ground with Green Paving*

# Rose Paving Lands Largest Permeable Paving Job in Chicago History

### Project Details:

Under the direction of the Illinois Sports Facilities Authority (ISFA) and the Chicago White Sox, Rose Paving has engineered the largest permeable paving project in Chicago at Lot L of U.S. Cellular Field.

The project is occurring at the height of the “Green” movement in Chicago. In an effort to construct and operate buildings more efficiently, builders and owners are utilizing “green” innovations to execute jobs. To comply with this wide-spread initiative, the parking area at Lot L was paved with environmentally-friendly Unilock® permeable pavers.

Permeable paving bricks are extremely durable and very high strength. Their interlocking nature enables them to withstand heavy traffic loads. Most importantly, these pavers help to protect the environment by allowing storm water to seep downward, trapping heavy metals and pollutants, rather than run off.

The pavers essentially eliminate the need for costly underground water filtration systems. The supporting bed of gravel under the pavement acts as a natural filter.
